Professional Summary

Principal Engineer and Application Architect with 15+ years of experience designing scalable cloud native platforms, distributed systems, and enterprise applications. Proven expertise across React, Node.js, TypeScript, Java, Spring Boot, AWS, and Azure, with strong experience in microservices, event driven architecture, API design, and Micro Frontends. Experienced in driving technical strategy, architecture decisions, engineering standards, and cross team delivery for complex enterprise platforms.**

Core Expertise

Architecture & Engineering: Cloud Architecture, Cloud-Native Systems, Microservices Design, Event-Driven Systems, Serverless Platforms, Distributed Systems, Micro Frontends, API Design

Technical Skills

Frontend: React.js, Micro Frontends, TypeScript, JavaScript (ES6+), Redux, Material UI (MUI), Angular, HTML5, CSS3, Responsive Web Design

Architecture & Design: Microservices Architecture, Event-Driven Architecture, System Design, Scalable Cloud Architecture

Backend: Node.js (Express.js), Java/J2EE, Spring Boot, Spring MVC, Hibernate, REST APIs, GraphQL

Cloud Platforms: AWS, Azure, Serverless Architecture, Cloud-Native Application Design

Database: MongoDB, MySQL, Oracle DB2, SQL Server, Data Modeling, Query Optimization

Cloud & DevOps: AWS (S3, Lambda, SQS, SNS, IAM, CloudWatch, Secrets Manager, API Gateway), Azure (Virtual Machines, Storage, Virtual Network, Azure Monitor), CI/CD (Git, GitHub, Jenkins, Azure DevOps), NGINX

Monitoring & Observability: Splunk, Kibana, AWS CloudWatch, Log Analysis, Application Monitoring

Tools: Git, GitHub, Jira, Maven, Ant

Agile Leadership: Scrum Master Facilitation, Sprint Planning, Stakeholder Communication, Cross-Team Collaboration, Technical Mentorship

Work Experience

Wipro Limited (Apple)

Senior Engineering Lead (Architecture / Platform)

Application Architect

June 2026 – Present

Bengaluru, Karnataka

Jun 2026 – Present

Apple Inc. — Retail EPM — Panorama Sprint Analytics Platform *React 19, TypeScript, Vite, TanStack Query, Bricks React, REST APIs*

- Providing end to end application architecture and technical direction for Panorama, evaluating frontend, backend APIs, data flows, integrations, scalability, reliability, and overall system design.
- Driving architectural decisions across the platform, aligning UI architecture, API contracts, backend capabilities, feature integration, and deployment considerations to deliver a scalable enterprise analytics solution.
- Migrated core features from mock data to live backend APIs, including Rule Builder, Milestones, Sprint, Epic, and Workload analytics.
- Leading frontend architecture and API integration for Panorama, a sprint and project analytics platform supporting Apple's Retail EPM organization.
- Migrated core features from mock data to live backend APIs, including Rule Builder, Milestones, Sprint, Epic, and Workload analytics.
- Designed scalable data fetching and state synchronization patterns using TanStack Query for backend integrated workflows.

- Diagnosed complex frontend and API integration issues involving request parameters, payload contracts, response models, URL encoding, and date handling.
- Identified backend defects through systematic API testing and provided evidence based technical handoffs to backend teams.
- Owned feature implementation, technical decisions, API validation, code reviews, and integration testing across local and deployed environments.

Wipro Limited (HP Inc)

Feb 2019 – May 2026

Senior Engineering Lead (Architecture / Platform)

Bengaluru, Karnataka

Device Control Center (HP Inc) | *React.js, Node.js, TypeScript, MongoDB, AWS, Microservices, Micro Frontends*

- Improved MFE architecture using LaunchDarkly, reducing deployment dependencies and enabling safer releases.
- Automated onboarding for 5000+ users in under 10 seconds, eliminating a 2–2.5 day manual process.
- Achieved 100% successful device onboarding, improving system reliability and integration.
- Enhanced CI/CD pipelines with Jenkins-based binary signing and S3 deployment workflows.
- Designed scalable Micro Frontend architecture enabling independent deployments across teams.
- Built reusable MFE frameworks, reducing developer onboarding time by 40%.
- Architected event-driven systems using AWS (SQS, SNS, Lambda) for scalable workflows.
- Developed high-performance REST and GraphQL APIs using Node.js microservices.
- Built AWS serverless workflows handling 1M+ device updates per month.
- Provided technical leadership through architecture guidance, mentoring, and Agile delivery.
- Improved platform reliability, scalability, and deployment safety through key enhancements.

EVERY India Pvt. Ltd

May 2016 – Feb 2019

Senior Software Engineer

Bengaluru, India

HMS-Rebill Claims Processing System | *Angular 4, Spring MVC, Apache Solr, OCR*

- Developed Angular 4 UI and Spring MVC services for HMS-Rebill claims processing workflows.
- Implemented Apache Solr-based search for high-volume document indexing and fast retrieval.
- Built an OCR + Solr prototype that improved document extraction accuracy for claims processing.
- Received Spot Award (2017) for Angular implementation and won Hackathon 2018 for the OCR + Solr solution.

CenturyLink Technologies

Jul 2014 – May 2016

Senior Software Engineer

Bengaluru, India

Telecom E-commerce & MyAccount Portals | *Spring MVC, JSP, Java, Web Services*

- Developed Telecom E-commerce and My Account portals using Spring MVC and JSP frameworks.
- Enhanced billing and payment workflows to improve customer experience and reduce processing delays.

Channel Mentor IT Solutions

Apr 2012 – Jul 2014

Software Engineer

Bengaluru, India

Travel Grid 2.0 (Corporate Travel Automation) | *Spring MVC, JPA, SQL Server*

- Developed Travel Grid 2.0 for end-to-end corporate travel automation using Spring MVC, JPA, and SQL Server.
- Implemented booking workflows, itinerary management, and reporting modules for enterprise travel clients.

Delmia Solutions Pvt. Ltd

Feb 2010 – Mar 2011

Associate Engineer - Development

Bengaluru, India

Assembly Line Automation Tools | *Java, JSP, Struts, Hibernate*

- Developed automation tools for assembly line balancing using Java, JSP, Struts, and Hibernate.
- Enhanced production workflow efficiency by automating manual calculations and visualization components.

Achievements

- Received Spot Award (2017) for Angular implementation in monolithic application modernization to SPA.
- Won Hackathon 2018 for developing an OCR + Apache Solr search engine prototype.
- Reduced MFE deployment cycles by 85% by introducing LaunchDarkly based dynamic version
- Automated onboarding for 5000+ users in under 10 seconds, eliminating a 2–2.5 day manual process and saving 2 person-days per cycle.
- Reduced MFE deployment dependencies by 85% using LaunchDarkly-based feature flag architecture.
- Built AWS serverless workflows handling 1M+ device updates per month.
- Achieved 100% successful device onboarding, improving platform reliability and system integration.
- Improved developer onboarding time by 40% through reusable framework design.
- Enhanced CI/CD workflows using Jenkins pipelines for binary signing and S3 deployments.
- Optimized platform workflows and integration across cloud-based device services.

Certifications

- **AWS Solutions Architect Associate Level** Mar 2026
Focused on designing scalable and resilient cloud architectures using AWS services such as VPC, ECS, S3, Lambda, SQS, SNS, IAM, and CloudWatch.
- **Microsoft Azure Administrator (AZ-104)** In Progress
Hands on learning covering Azure Virtual Machines, Azure Storage, Virtual Network, Identity and Access Management, and Monitoring.
